

# SLIP NO 06

---

1) State the difference between block level and text level tags.

**ANS:-**

**Block-level:**

- It always starts on a new line as well as make the page full width from the left side to the right side.
- It can take up one or multiple lines and has a line is getting a break before and after element.
- `<address>` - Shows contact information is example of block-level element

**Text level tag:**

- It is related to style which defines character style.
- It is flow of the text without breaking of new line
- `<img>`, `<span>`, `<strong>`, `<em>`, `<a>` are the example of HTML of text level tags.

2) Write procedure to insert a copyright symbol on a web browser.

**ANS:-**

1. Use the HTML entity code for the copyright symbol. You can do this by adding the following code to your HTML file:
2. Use the Unicode for the copyright symbol. You can do this by adding the following code to your HTML file:
3. Use the keyboard shortcut for the copyright symbol. This method will depend on the operating system and the browser you are using. Some common keyboard shortcuts for the copyright symbol are:
  - Windows: Alt + 0169
  - Mac: Option + G
  - Chrome: Ctrl + Alt + C
4. Use the Insert Symbol feature in your text editor or word processor. This method will depend on the text editor or word processor you are using. In general, you can find the Insert Symbol feature under the "Insert" or "Symbols" menu.

**example:-**

```
<p>Copyright &copy; 2021 Your Company Name</p>
```
